---

The Red Victor 1 Racing Team are proud to announce a very exciting new partnership with the world renowned turbo company Owen Developments for 2012.

Andy Frost, team principal of RV1 racing says, "This is a wonderful opportunity for the team. Owen Developments are one of the world's leading turbo development companies and as such, can bring us into a whole new world of turbo tuning and development with the RV1 twin turbo Garrett set up. With Owen's extensive range of turbos, aftermarket billet compressor wheel technology and their in-depth knowledge of boosted applications, this is a fantastic opportunity to get the very latest turbo data and utilise it on the car. In return we hope to furnish Owen Developments with plenty of real world data for them to digest and use for their future reference."

Lee Owen of Owen Developments says " We are very pleased to be in a position to support Andy's street legal Pro Mod for the coming season. It's our intention to help Andy upgrade to the latest Pro Mod spec turbos and wastegates.

We are very much looking forward to a mutually successful partnership and a successful seasons racing.

We thank Owen Developments for their foresight and interest in supporting our team and our project - Red Victor 3, and are looking forward to working with them throughout 2012 and beyond.
