More great news for the RV1 racing team. Turbosmart USA are supporting the team again in 2014!

We use 2 of their 60mm wastegates with travel sensor provision built in as std, and the Race Port BOV on our record breaking car and they performed faultlessly all year long! They have become yet another part of our record breaking performance....

The team thank VP Marty Staggs and the team at Turbosmart USA for their fantastic support and awesome products, and look forward to seeing what their products can do in 2014!

You'd be mad not to use them for your turbo project! Click on their logo to the left, or visit their facebook page here <https://www.facebook.com/TurbosmartUSA> to see what products they have to offer.....
