The team would like to thank the great folks at Radtec for supporting the team again in 2014!

They handle all the cooling on RV3, including the water radiator, trans cooler and Lenco cooler. They are all custom made to exacting standards to cope with the heat generated by the 3000+ hp that RV3 has.

They do all types of custom aluminium radiators for any car. So, if you are in need of one just visit their website where you'll find what ever you need for cooling your vehicle.
