WELCOME TO THE LATEST SPONSOR OF THE RED VICTOR RACING TEAM.

As official compressed air suppliers to the Red Victor Racing Team, R.E.P Air Services Ltd are proud to be associated with Andy and the team.

[REP Air Services Ltd](#) ., was established by Gareth Bott in 1976 and supply industrial and automotive compressors, air dryers, filtration, airtools, hoses couplings and fittings, pneumatic valves and air breathing preparation equipment. Whilst sales, service, repairs, and pipework installation are a fundamental part of the business, long and short term contract compressor hire is becoming a major facet of the business, where companies do not want to tie up large amounts of capital, but prefer just to pay monthly for the air they use.

"Rep-Air" as it has come to be known, also offer leak detection and energy surveys to help firms minimise their energy bills and reduce their carbon footprint. As distributor members of the British Compressed Air Society, REP-Air can offer expert advice in the selection and installation of the correct type of compressor, whether it be rotary screw, Hydrovane, or piston types, for any particular, low or high pressure application.

Andy Frost says " I've known Gareth and his company, through the racing scene, for many years, and I know that they have contracts with big blue chip companies such as DuPont as well as looking after the needs of small businesses alike. I would encourage all our associates to support the people who support us."

REP are based in Loughborough in the heart of the Midlands but their engineers operate countrywide. The team can be contacted on 01509 213452 or via email at sales@rep-air.com .
