We ran 7.45 @ 197.6mph and then a quicker 7.41 @ a much slower 190mph. We upped the boost a couple of pounds only to realise the engine is starting to see a lot more backpressure than boost, killing the engine power.... We have a couple of things to try and allieviate the issue for the next time we're out...

Next show is Snetterton race circuit. We'll just be doing a demo burnout and a launch (depending on track conditions). I'm thinking about going to the Flame and thunder show to get some much needed development time. The car is still not launching anywhere near how we want it to. Power doesn't seem a problem though and a big thanks to Steve Wood at Motorshack for continuing to supply us with awesome VP Q16 fuel....
