---

The team is pleased to announce a technical partnership with Frozen Solid. They are specialists in the cryogenic treatment of performance engine and transmission parts, and they will be treating some of RV3's engine components in readiness for the 2014 season. For an in depth explanation of the process visit [www.frozensolid.co.uk](http://www.frozensolid.co.uk).

Team principal Andy Frost uses cryo treated parts in his championship winning transmissions and has found that treated components have a life cycle 4 times longer than non treated parts!

Based in Cambridgeshire Frozen Solid have 15 years experience of cryogenic treatment in the motorsport industry. This means they have a wealth of experience of cryo treatment of motorsports components.

The team is looking forward to working with Frozen Solid on all the technical aspects of the treatment, and look forward even more to seeing the results!
